

# Cartridge Dust Collectors

- Purge Filters during Blasting
- Expedite Filter Replacement

**Manual Reverse Jet-Pulse Dust Purging** can be performed with push-button ease while the air-blast system is operating. Minihelic gauge keeps operator informed about dust buildup on filtration surfaces. A fully automatic photohelic control is available as an option.

**Vertical Cartridges** are easy to replace, provide large filtration area and capture 99.999% of particles one-half micron or larger. In most cases, air can be recirculated to the workplace, reducing HVAC costs.

**Sixteen-Gallon Waste Drum** (supplied by Empire) provides extra capacity to minimize labor and downtime for dust disposal.

## CDC Standard Specifications

	CDC-6	CDC-9	CDC-12
<b>Blower Assembly</b>	1½ hp	2 hp	5 hp
<b>CFM/Static Pressure</b>	600/6"	900/6"	1200/11"
<b>Electricals*</b>	230/60/1	230/60/1	460/60/3
<b>Cleaning</b>	Manual reverse jet pulse		
<b>Filtration Area</b>	452 ft <sup>2</sup> through 2 cartridges		
<b>Waste Drum Capacity</b>	16 gallons		
<b>Enclosure Size</b>	35"x 40"x 116"		

\* Other electricals available

Empire's Cartridge Dust Collectors (CDC) increase productivity in three ways.

For starters, they can operate continuously; the air-blast system does not have to be shut down while dust is removed from filtration surfaces.

Next, they simplify dust removal from filtration material. Push-button reverse jet-pulsing, a standard feature on all three CDC units, enables an operator viewing a minihelic gage—which monitors pressure drop across the filter—to purge dust while the air-blast system is operating. Alternatively, an optional photohelic upgrade moves dust from filtration surfaces to a collection drum automatically—at the right time and without operator involvement.

Finally, the collection cartridges, once worn, can be quickly and easily removed and replaced through a large access door.

Empire's Cartridge Dust Collectors extend operating cycles, maximize "up" time and reduce maintenance costs—all adding to higher profits.

# Cartridge Collectors for High-Production Systems

Designed for dust collection with high-production equipment such as automated air-blast systems, these EM cartridge collectors increase air flow, provide more filtration area and clean filters automatically.

The filter-cleaning system features a photohelic gauge provided as standard equipment. This unit responds to high and low set points—measured in terms of pressure differential across the filtering material—to activate the jet-pulse cleaning process. Once the pressure limits have been set, these collectors essentially clean themselves.

**Intake Area** is specifically designed to extend life of interior components and surfaces exposed to abrasive media.

**Horizontal Cartridges** are easy to replace, provide large filtration area and capture 99.999% of particles one-half micron or larger.

**Lid for Standard 55-gallon Waste Drum** is supplied. Large drum capacity reduces labor and downtime for dust disposal. (Drum not supplied.)

## EM Specifications

	EM2-2	EM2-4
<b>Blower Assembly</b>	5 or 7½ hp	7½, 10 or 15 hp
<b>CFM</b>	900 - 1,200	1,600 - 2,600
<b>Static Pressure</b>	6 - 18"	6 - 18"
<b>Electricals*</b>	460/60/3	460/60/3
<b>Cleaning</b>	Automatic reverse jet pulse	
<b>Filtration Area</b>	528 ft <sup>2</sup>	1056 ft <sup>2</sup>
<b>Enclosure Size</b>	40" x 65" x 150"	60" x 65" x 150"

\* Other electricals available

## BEST WARRANTY IN THE INDUSTRY

Three-years limited on parts and labor

### Empire Air-Blast Products

- A complete range of cabinets
- Robotic, turntable and in-line automation
- Blast rooms and blast booths
- Portable blasters
- A full line of parts and accessories

**NEVER USE SILICA SAND IN ANY  
EMPIRE EQUIPMENT**

Information subject to change without notice.
